\* When a foam manufacturer cuts foam into particular sizes, that creates a scrap foam, clean and unused, but not functional. That scrap is ground into small pieces and then compressed together using an adhesive to bond it. This is called 'rebonded' foam. There is no way to determine if the rebonded foam in your futon mattress is a foam that contains flame retardants. It provides an eco-friendly resolution for scrap foam. The result is an economical alternative to polyurethane foam.

\*\* Visco-Elastic Foam is also known as 'memory foam' and any consumer who has a history of sensitivity to memory foam should be aware of the contents.
